## Centennial Facility

Ready Mixed Concrete, Asphalt and Recycling Plants

An AGGREGATE INDUSTRIES company

Printed on recycled paper.

## Aggregate Industries' West Central Region

## We are proud to unveil our new Ready Mixed Concrete, Asphalt and Recycling plants.

These state-of-the-art facilities expand our existing production capabilities and support the continued development of sustainable products. In addition to quality asphalt and ready mixed concrete products, we offer innovative green building products including recycled crushed concrete and asphalt for use as base material, pervious concrete, porous asphalt and ready mixed concrete products using fly ash.

### Asphalt Plant Overview

The asphalt plant at Centennial is a Gencor drum mix plant capable of producing over 400 tons per hour. The plant has six storage silos above two scale decks allowing up to 800 tons per hour load out capacity. Our new plant is capable of producing all MGPEC and CDOT product specifications, along with innovative new sustainable products including porous asphalt and asphalt mixes with recycled asphalt product (RAP).

This new location serves the growing markets southeast of Denver and we are committed to providing customers with the highest quality asphalt products available in the market. Our quality products, coupled with our experienced, award-winning contracting and paving crews, create a product and service combination that is unmatched in the industry.

### Ready Mix Plant Overview

Centennial's ready mixed concrete plant is a Dual Alley plant with central mix and dry batching capabilities, producing up to 300 cubic yards per hour. This location is well suited to serve the south and central Denver markets with 30 delivery trucks.

The plant is fully enclosed and is connected to a state-of-the-art admixture system that allows us to provide a broad range of value-added ready mix products, including our integrated liquid color dispensing system and an automated fiber dispenser. We also offer chilled water for hot weather concrete and heated water for cold weather concrete.

The new plant is configured to batch with seven different aggregates, including recycled aggregates, and also features an innovative truck washout weir system that has the ability to recycle wash water back into the concrete batching process.

### Recycling Overview

Recycling is becoming more and more important in our industry and our Centennial Plant has an on-site recycling center to collect and process broken asphalt and concrete.

Materials accepted at this facility typically consist of tear out concrete from selected projects, returned millings from our own construction operations and tear out asphalt from selected projects.

The recycled products we produce can be used as recycled concrete aggregates or recycled base materials and can help builders and developers gain valuable credits towards their project's U.S. Green Building Council LEED Certification.

As further evidence of our company commitment to the environment, Aggregate Industries was recently awarded the State of Colorado's "Sustainability Champion Award" for our commitment to excellence in environmental management.
