

Custom Soil Blends

Sustaining Urban Plantings

For your next project, choose from Aggregate Industries' proven line of custom soil blends.

Aggregate Industries specializes in producing light weight horticultural soils for roofs and planters, storm-water bio-retention pond soils, CU-Structural Soil® urban tree mix and Green Roof media. All of our custom soil products can be blended to meet our customers' specifications.

These innovative soil blends have been used on many high profile projects like the new Washington Nationals Stadium, the Pentagon 9/11 Memorial, the newly renovated Georgetown Waterfront Park and the Rockville Town Plaza in Maryland.

Our custom soil blends allow landscape architects to increase recycled product usage by incorporating yard waste compost, recycled aggregates, slag, fly ash and recycled silts. We offer top quality products, competitive pricing, industry-leading quality control and laboratory analysis and we can deliver materials directly to your job site.

Our other Green Products include pervious concrete, porous asphalt, recycled base materials made from recycled concrete and ready mixed concrete products with supplementary cementitious materials such as fly ash and slag.

We are proud members of both the American Society of Landscape Architects (ASLA) and the U.S. Green Building Council.

Our expanding range of Green Products help builders and developers gain valuable credits towards their project's LEED Certification.

Urban tree plantings in Georgetown, DC

Aggregate Industries' Mid Atlantic Region is an environmentally responsible producer of aggregates, asphalt, ready mixed concrete and custom blended soil operations serving the markets in Washington DC, Maryland, Northern Virginia, and West Virginia.
